

Serial No.: 10/053,666
Atty. Docket No.: P67552US0

IN THE ABSTRACT:

Please amend the abstract as follows:

-- [There is disclosed a] A device for connecting
movable parts with structural components of airplanes or [the
like] other high-speed vehicles, including at least one fitting
provided with at least one bearing. In order to provide such a
device exhibiting low thermal stresses, a low weight, a high
bearing capacity and a producibility as simple as possible, it is
provided that the at least one fitting is made of a synthetic
material and glued with the movable part. The resin transfer
molding (RTM)-method is particularly suitable to produce the
fitting.--
